DETAILED ACTION

Response to Amendment

1. The present Office action is made in response to the amendment filed on 8/22/2006. It is noted that in the amendment, applicant has amended claims 2-3, 7, 13-14, 18-21, 23, 26, 28, 32-33, 36 and 37 and canceled claims 1 and 6. The remaining claims 2-5, 7-33 and 36-37 are examined in this Office action.

EXAMINER'S AMENDMENT

2. An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on 9/5/2006, applicant's representative, Laura Moskowitz, has requested an extension of time for three (3) MONTHS and authorized the Director to charge Deposit Account No. 19-4880 the required fee of \$570.00 (Note that a fee of \$450.00 for extension of two months has been paid by applicant on 8/22/2006) for this extension and authorized the following examiner's amendment. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

CANCELED CLAIMS 2 AND 13.

Allowable Subject Matter

3. Claims 3-5, 7-12, 14-33 and 36-37 are allowed.
4. The following is an examiner's statement of reasons for allowance:
 - a) The device as claimed in each of independent claims 3, 14, 18, 26, 32, 33, 36 and 37 is patentable with respect to the prior art, in particular, the U.S. Patent Nos. 5,305,139 and 5,684,626 by the limitations related to the phase plate or the spatial filter or the polarization disposed at a position of a diffraction image plane, and the objective lens is adapted to be focused on either one of the diffraction image plane and the sample. It is noted that while the use of an illuminating system having optics for focusing illuminating light onto a converging point, a sample disposed between the illuminating system and the converging point, and an objective lens disposed after the converging point is disclosed in the mentioned Patents; however, the cited Patents do not disclose the feature related to the phase plate or the spatial filter disposed at a position of a diffraction image plane which is orthogonal to the optical axis of the illuminating light and includes a converging point for selectively blocking a part of the illuminating light transmitted through a sample or to change the polarization features of the light beam on the sample, and the objective lens is adapted to be focused on either one of the diffraction image plane and the sample.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
